ADDING LONGER WORDS TO YOUR APP

guided notes

ADDING LONGER WORDS TO YOUR APP

What is Adda's BRILLIANT idea about how to use the database to make it possible to generate longer anagrams? Explain it!

When you ask your app for an anagram for CAT and it gives you back ACT, what do those two words have in common? How can you use that info to help you?

In order to add a column to your database, what is the FIRST command you need to run? Fill in the rest:

```
rake
```

What three parameters does the `add_column` method require?

1. The table name

2.

3. The new column datatype

What does the `join` method do?

What does the `sort` method do?
